Dear Parents,

We have just completed our detailed self-portraits and the students are ready to move onto their next art project. The second grade students are currently studying the life cycle of a Monarch butterfly as a science unit. In art class the students will look closely at the color and anatomical parts of a butterfly. They will learn about color theory as they use watercolor paints to create the colorful wings of a butterfly. These painted butterflies will be placed into a collaged background depicting the environment that a butterfly may be found. These pieces will be colorful and beautifully detailed!
